

Solution Overview

Powerful, next generation secure mobile collaboration and file sharing platform for today's mobile workforce.

kiteworks by Accellion is the definitive platform for securely sharing files, providing business users with a superior user experience and greater productivity, while offering best in class IT security and governance.

Key Benefits

- Deliver secure mobile productivity for the enterprise
- Provide unified view across all content sources
- Delight end-users, improve adoption and satisfaction
- Manage and audit all file and folder activity
- Enable cross-organizational project collaboration
- Demonstrate compliance with SOX, HIPAA, GLBA
- Scale for global enterprise deployments
- Integrate with IT infrastructure
- Increase data security

Key Features

- Mobile first design
- Mobile access to enterprise content
- Private cloud deployment (on-premise or hosted)
- Modular three-tier architecture
- Data sovereignty
- Native mobile apps for iOS and Android
- Secure mobile container
- MDM integration - Good and MobileIron
- Task management
- Move Tray
- Collaborative online folders
- Secure file synchronization
- Administrative dashboards and system alerts
- Reports and audit trails
- Authentication via LDAP integration
- Single sign-on via SAML
- Integrated AntiVirus scanning

Mobile First Design

The kiteworks experience sets a new bar for mobile productivity with its powerful, elegant, and intuitive user interface that empowers mobile users to seamlessly access, share, and manage content across devices. Key highlights:

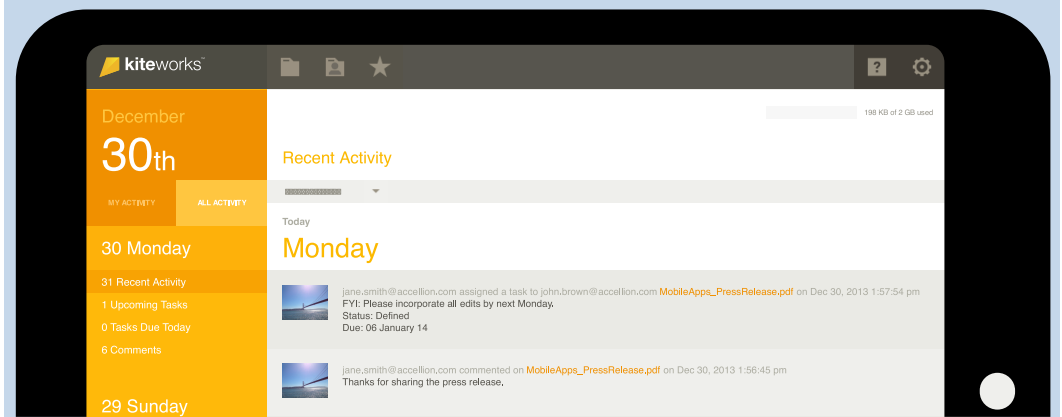

- Seamless unified experience across the tablet, phone, web and desktop screens
- Icon based design optimized for mobile screens
- Activity stream of the most pertinent activities in real-time
- Move Tray to easily drag and drop multiple files across folders and content sources
- Mobile Productivity suite for editing Office documents
- Tasks and workflow to manage projects

Secure Universal Access to Enterprise Content

The kiteworks solution extends the value of existing content systems by enabling VPN-less mobile access and secure external sharing of enterprise content. Users can link content from multiple data stores in a single kiteworks folder, which can then be shared securely with external users. Documents of record are always maintained in the source system, along with a complete audit trail. With kiteworks, end users get a single universal point of access for working with all enterprise content regardless of where it resides. Popular content sources supported include:

- Microsoft® SharePoint 2007, 2010, and 2013
- Microsoft SharePoint Online
- Windows File Shares (CIFS and DFS)
- Documentum

Powerful, Elegant, Intuitive User Experience

Private Cloud Enterprise Architecture

The kiteworks solution was designed from the ground up for enterprise scalability, security, and agility.

Private cloud – The kiteworks architecture provides dedicated and isolated cloud infrastructure enabling enterprises to keep their servers, storage, application service, meta-data, and authentication all within the organization's firewall. Deployment options include:

- Private Cloud On-Premise
- Private Cloud Hosted
- Hybrid - Combination of on-premise and hosted private clouds.

Modular three-tier architecture - An industry first, kiteworks enables extreme deployment flexibility by allowing the web, application, and storage tiers to be separated and placed anywhere in the network. Each tier can be scaled independently or all can be combined into a single virtual appliance.

Data sovereignty and global deployments – kiteworks optimizes performance for users around the world by placing servers close to regional offices. Furthermore, data residency policies can be applied to restrain data storage to physical geographical boundaries to meet security and compliance requirements.

Mobile Enablement and Productivity

The kiteworks mobile app for Apple iOS and Android devices enables users to securely create, access, and collaborate on up-to-date corporate content anytime, anywhere.

- Mobile access to content in SharePoint, Windows File Shares and Documentum
- Create and edit Microsoft Office files within an encrypted secure mobile container for online and offline use
- Move and combine content across kiteworks and enterprise content sources via Move Tray
- View latest file activity via a real-time Activity Stream
- Manage project workflows with lock/unlock and task management

- Mobile device and app management controls including remote wipe, pin code, whitelisting
- MDM integration with MobileIron, Good Technology, and Symantec

Online File Sharing

The kiteworks solution helps enhance employee productivity. Real-time activity and file views bring pertinent information to the forefront. Users can easily collaborate with internal and external stakeholders by assigning roles, tasks, and sharing files via secure links. The solution facilitates real-time collaboration via innovative features including:

- Activity stream
- Move tray
- Task management
- File synchronization
- File locking
- Secure file sharing
- File versioning
- Comments

IT Admin and Security Controls

The kiteworks admin console provides intuitive and interactive dashboards as well as system alerts that deliver critical system information at a glance. Dashboards deliver:

- Status of system services
- Licenses consumed / remaining
- Storage allocation
- Snapshot of activities taking place on the system
- System health alerts

Key security and administrative features include:

- Auditing and reporting
- Anti-Virus
- LDAP/AD, SSO
- Encryption keys ownership
- Remote wipe
- App whitelisting
- Offline pin
- Restricted admin access to content
